OTDR testing just evolved, again!
Let's get you ahead of the curve

D-Series OTDRs: *Building on industry-acclaimed expertise in OTDR testing*

Maintain top optical performance with no downtime, no servicing
Patent-protected Swap-Out connectors and built-in connector health checker allows to replace worn connectors in the field, as needed, without having to send the tester back for maintenance.

Unprecedented versatility
Power measurement and optical link mapping from the same port, with results compiled in a single report-without needing to disconnect the fiber.

Future-proof test capabilities
Extended capability to test FTTx networks in construction and maintenance phases for all current and future PON technologies, including XGS-PON.

Field efficiency
Part of EXFO's interconnected ecosystem, powered by EXFO Exchange—a secure collaborative software platform that automates and optimizes field testing, reporting, workflows, troubleshooting processes and more.

UNIQUE COMBINATION OF LEADING FEATURES:

Swap-Out connector
