

A new wave is coming. Are you ready for next-gen PON deployments?

EXFO

With the arrival of new PON technology overlays, today's standard power meters will no longer be enough. Legacy instruments will become obsolete. Simply knowing which PON technology is deployed on the fiber under test will become challenging for technicians.

How will you surf this new wave?

Introducing EXFO's PPM-350D next-gen PON power meter

Our next-gen PON power meter is here to save the day.

The only power meter with PON-Aware™ technology.

It automatically detects which technology is being used and assesses the pass/fail status of the network under test.

Compatible with legacy and next-gen PON technologies:
GPON, EPON, XG-PON, XGS-PON, NG-PON2, 10G-EPON

Key features and benefits

- Supports 10G-capable PON networks
- Pass-through mode for ONT/ONU verification
- Rugged and designed as per IP54 enclosure standard
- Rechargeable battery that lasts all day
- Bluetooth and USB connectivity—smart device app

 **Bluetooth™**

 **Smart phone**
